Vocabulary Cards Topic 5  
Set C Definitions

**line segment**

A part of a line with two endpoints.

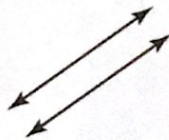

**line**

A set of points that is endless in two directions.

**parallel lines**

Lines that never cross.

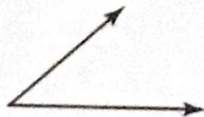

**intersecting lines**

Lines that cross at one point.

**angle**

A figure formed by two rays with the same endpoint; that endpoint is the vertex of the angle.

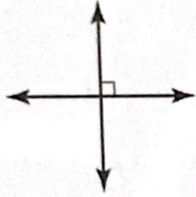

**ray**

A part of a line with one endpoint.

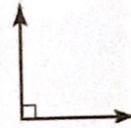

**perpendicular**

Two lines, line segments, or rays that make a right angle.

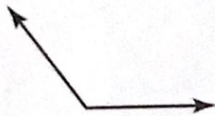

**right angle**

An angle that forms a square corner.

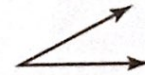

**obtuse angle**

An angle that is greater than a right angle.

**acute angle**

An angle that is less than a right angle.

**side**

A line segment forming part of a polygon.

**polygon**

A closed figure made up of line segments.
